Achievements

Mavera Platform Store Management

(03/2024 - 11/2024)

- Developed a customized mobile application for warehouse management that addressed Maveria Company's specific logistics requirements, facilitating the seamless handling of 1,500+ shipments monthly across retail and wholesale operations.
- Streamlined the logistics workflow, enabling efficient shipment receipt, tracking, and delivery to final destinations.
- Technologies used:** Laravel, Livewire, MySQL, Bootstrap, and RESTful APIs.

Mavera Platform Client E-Commerce

(03/2024 - 11/2024)

- Built a comprehensive e-commerce system with a mobile application aimed at engaging Iraq's workforce.
- Integrated two payment gateways, **Zain Cash** and **nGenius Payment Gateway**, to ensure seamless and secure transactions.
- Connected the platform with Maveria's Shipment System, automating the shipping process and ensuring operational consistency.
- Technologies used:** Laravel, Livewire, JavaScript, Bootstrap, RESTful APIs, and payment gateway SDKs.

Najdi Platform

(04/2024 - 06/2024)

- Designed and implemented a Laravel-based e-commerce system that offers users the ability to customize 3D shoe designs.
- Enabled real-time product customization, allowing users to select colors, models, and embroidery options, enhancing the customer experience.
- Technologies used:** Laravel, Three.js, Livewire, MySQL, and Bootstrap, Redis.

BuyGlobal Application

(09/2022 - 12/2023)

- Played a key role in the development of the **BuyGlobal App**, delivering an end-to-end solution for administrators and customers.
- Designed an intuitive **Admin Panel** to streamline system management and empower administrators with robust tools.
- Implemented a user-friendly **Customer Browser**, enabling seamless order placement for Turkish labor products.
- Created scalable RESTful interfaces enabling seamless data exchange between backend systems and frontend applications; this resulted in processing speeds increasing by an average of 30 seconds per transaction cycle.
- Engineered an automated data aggregation framework that reduced the time spent on manual product listing updates by 15 hours weekly; streamlined operations to improve overall efficiency in inventory management processes.
- Technologies used:** Laravel, Livewire, JavaScript, MySQL, Bootstrap, RESTful APIs, and web scraping tools (PPTR).

CRM System

(03/2023 - 05/2023)

- Enhanced an existing CRM system to support **multi-tenancy** and **SaaS** capabilities, enabling scalability for multiple

organizations.

- Integrated features for accounting and project management, improving operational efficiency.
- **Technologies used:** Laravel, Bootstrap, MySQL.

SEU Exam Portal

(01/2022 - 03/2022)

- Developed a comprehensive exam portal for SEU to manage and organize student exams by branch, building, and room.
- Integrated specific proctoring conditions to ensure exam integrity and compliance with university policies.
- **Technologies used:** Laravel, Bootstrap, MySQL.

SEU Admission Portal

(01/2022 - 06/2022)

- Built an **Admission Portal** for student enrollment at three levels: master's, bachelor's, and diploma.
- Designed a **sorting system** based on students' exam scores and preferences, streamlining the application process.
- Integrated multiple **APIs** within KSA to validate student details and ensure accuracy in the admissions process.
- **Technologies used:** Laravel, Livewire, Bootstrap, Oracle, and API integration.

CRM System (Volunteer Project)

(01/2020 - 09/2020)

- Designed and developed a **CRM system** using Laravel 7, tailored to manage data for families and students.
- Implemented a robust **roles and permissions system**, ensuring secure and granular access control.
- **Technologies used:** Laravel 7, MySQL, Bootstrap.
